

**EXPRESSION OF INTEREST**

New sustainable methanol production capacity

# Helping you reach your decarbonization targets

Enerkem is developing a pipeline of new projects to produce **1,000,000 tonnes per year** of sustainable methanol

This methanol will be:

- Produced from sustainable feedstock
- Eligible under all global regulated markets (i.e. RED)
- Competitive to compliance cost in regulated markets

Enerkem invites key players to express their needs for sustainable methanol.

€1.5 billion

Investment in two fully-commercial projects

350kt

Annual production of sustainable methanol by 2029

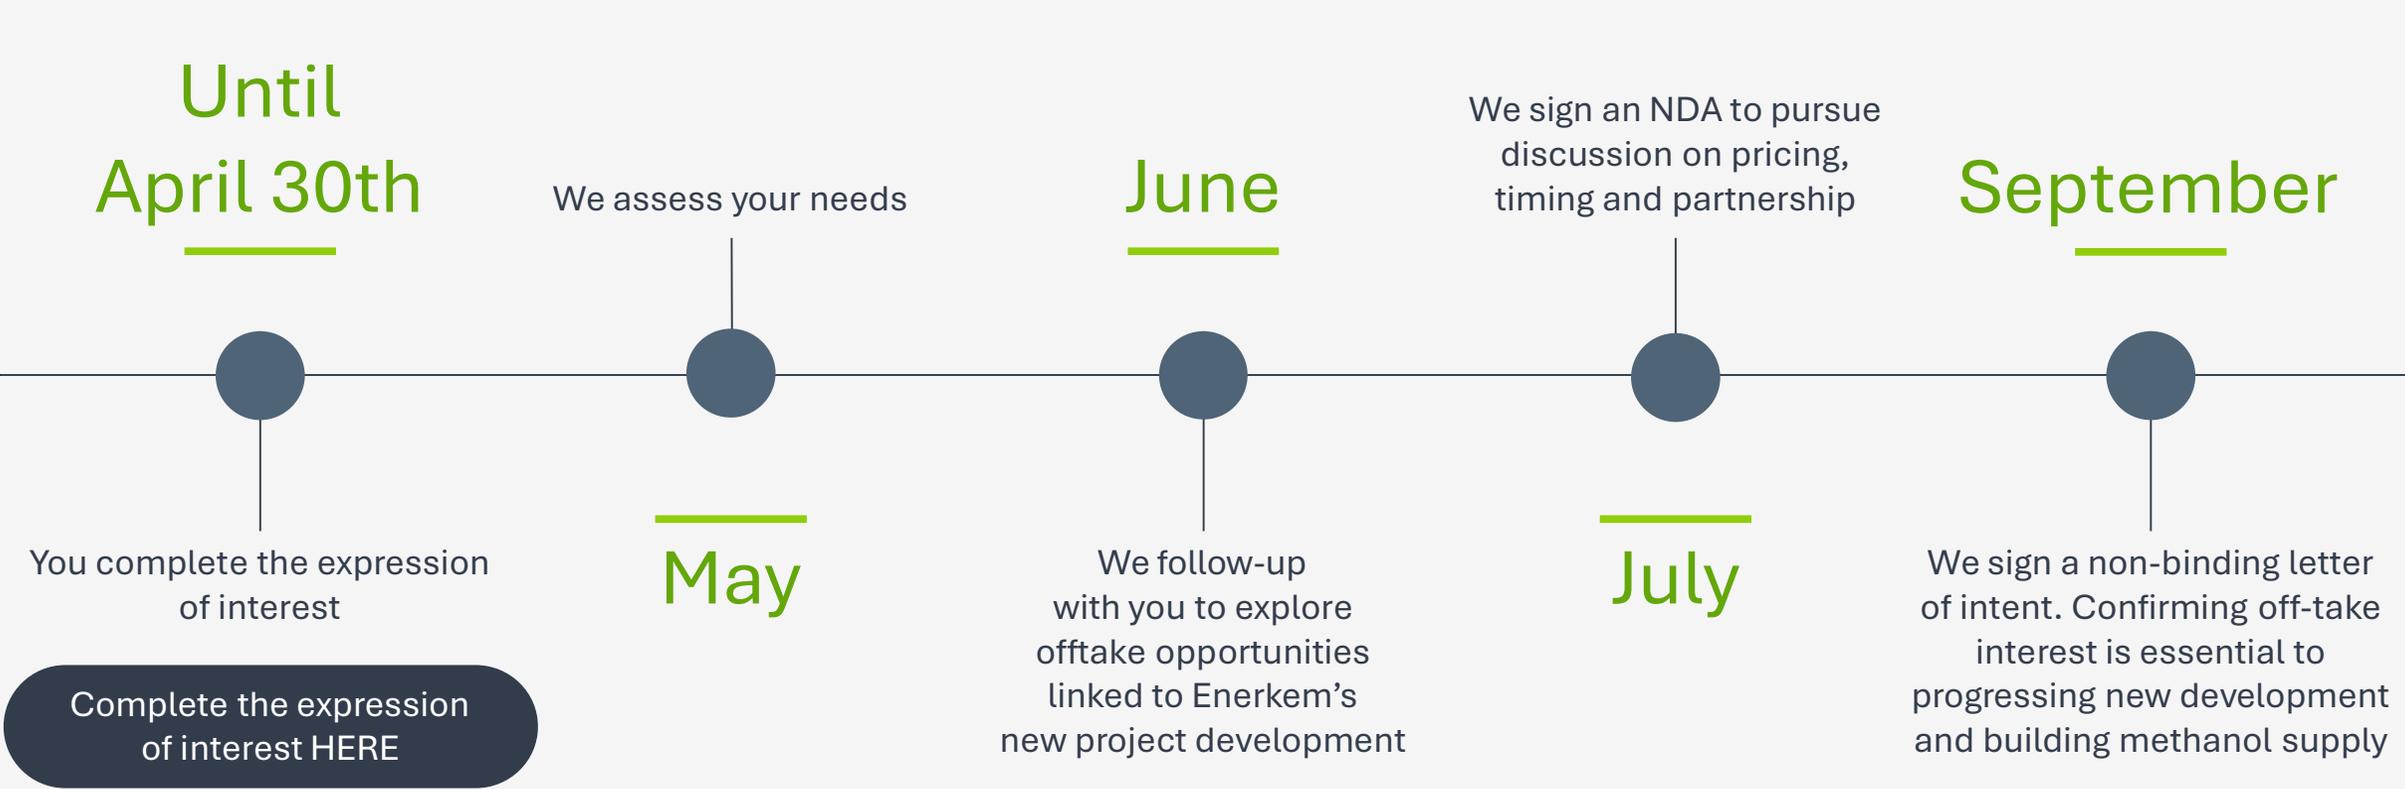

We want to help you secure your sustainable methanol supply

# Next steps

Working with you to secure your sustainable methanol through non-binding letters of Intent

All information received will be treated with the strictest confidentiality.

# Enerkem's project development strategy

## Replicating our reference project: Ecoplanta (El Morrel, Tarragona, Spain)

360,000 tonnes/yr

of non-recyclable waste and residual biomass diverted from landfills

240,000 tonnes/yr

of sustainable methanol produced and sold as transportation fuel & chemicals

270,000 tonnes/yr

of CO<sub>2</sub> equivalent of GHG emission reductions

→ Leveraging our existing supply chain

→ Leveraging our partnership with  **TEN** TECHNIP ENERGIES for project execution

- First commercial waste-to-methanol plant in EU
- FID confirmed in January 2025

# New project locations

## Key locations for projects with new production capacity of 1,000,000 tonnes per year

➔ Selective criteria to maximize economic and environmental performance

- Availability of low cost, low carbon intensity electricity & hydrogen
- Availability of feedstock
- Offtake market location
- Existing supply chain

➔ Open to exploring other locations of your interest

Complete the expression of interest [HERE](#)

# Competitive against compliance costs

Our sustainable methanol is an affordable solution to reach your targets and reduce your costs

Non-compliance costs

With Enerkem's sustainable methanol

■ Fossil fuel ■ EU ETS ■ Fuel mandate penalty ■ Enerkem's sustainable methanol

- Transition fuels can aid in achieving short-term regulatory compliance
- Longer term compliance will require sustainable fuels in addition
- Supply of low carbon fuels constrained and will remain so given high demand
- Price setting mechanism therefore likely to remain non-compliance cost
- Our sustainable methanol can deliver significant cost savings
- Entering into long-term off-take agreements offers security over supply
- Opportunity to benefit from falling production costs over time
